

Printer Cartridge Recycling

Laser Cartridges

In order to recycle laser cartridges they are taken apart and then re-manufactured. Remanufactured laser cartridges can cost around a third of the price of an original cartridge.

Re-manufacturing laser cartridges can save a litre of oil and help prevent landfill sites being filled.

Inkjet Cartridges

Many companies will pay a small amount for each used ink cartridge, and many charities collect cartridges as a means of fundraising for a variety of projects. The collected ink cartridges are cleaned, refilled with ink and then sold on again.

Refilled/Compatible Cartridges

Unfortunately, at present there is not much opportunity for recycling refilled or compatible cartridges. Contact the manufacturer to check whether they will recycle these. There are useful links to each manufacturers website at www.inlprinterweb.co.uk/acatalog/Recycling.html.
